Daily Health Check. Each camper will undergo a health screening prior to the start of camp each day (including missed camp days, see below). Prior to arriving at camp each day, each camper must receive a temperature check, and a parent or guardian must verify that the check was completed. In addition, a parent or guardian must complete a daily health screening questionnaire on behalf of their camper. **If any of the below circumstances is true for a camper, that camper must stay home from camp:**

- In the past 24 hours, the camper has reported:
  - A fever of 100.4°F or higher
  - A cough
  - Shortness of breath or difficulty breathing
  - A sore throat
  - Headache
  - New loss of taste or smell
  - Muscle or body aches
  - Nausea/vomiting/diarrhea
  - Congestion or running nose not related to seasonal allergies
  - Unusual fatigue
- Within the past 5 days, the camper has had a positive test result for COVID-19
- The camper is currently awaiting the results of a COVID-19 test due to possible exposure or symptoms and not from routine asymptomatic screening
- The camper has been instructed by a public health or medical professional to self-monitor, isolate or quarantine because of concerns of COVID-19 infection
- The camper has taken medication to reduce a fever prior to coming to camp
- The camper is NOT fully vaccinated against COVID-19 OR, is eligible for* and has NOT received a booster shot, AND:
  - Someone living in the household with the camper has reported any of the above symptoms in the past 24 hours.
  - Within the past 5 days, the camper has been in close contact with someone with suspected or confirmed COVID-19.
  - The camper has traveled** within the last 5 days.

A camper is considered “fully vaccinated against COVID-19” after two weeks have passed since the administration of their second vaccine dose.

If a camper is out sick and did not report on the daily health check, they must also complete a health check for the missing days.

If a camper has symptoms that are not consistent with a diagnosed chronic illness that is documented in CampDoc, the camper will be required to provide proof of a negative COVID-19 PCR test administered by a laboratory or healthcare provider. After a negative test result and 24 hours without symptoms, the camper will be eligible to return to camp.
Illness during Camp. If a camper presents a fever or reports feeling ill during camp, and the determination of staff is to isolate the camper on-site, a parent or legally authorized adult will be called to pick them up immediately. In the case where a camper who has attended camp develops symptoms of COVID-19, we will notify all parents with children in that camp without releasing any information about the camper’s identity.

Returning to Camp after Illness. Should a camper be sent home from camp due to illness with any type of symptoms, our policy is:

- If the symptoms are not suspected of being COVID-19, the camper can return to camp after they have been symptom-free for 24 hours.

Any camper with symptoms of suspected or confirmed COVID-19 can return to camp when:

- At least 24 hours have passed since recovery (defined as no fever without the use of medications and improvement in respiratory symptoms like cough and shortness of breath); AND
- At least 5 full days have passed since the symptoms first appeared

Returning to Camp after Exposure

If a camper believes they have had close physical contact with someone with COVID-19 but they are not showing signs of illness, their health should be closely monitored for development of a fever, cough, shortness of breath and other COVID-19 symptoms for at least 10 days following the last day they were in contact with the person infected with COVID-19. The camper should not attend camp or other public places for at least 5 full days unless they are fully vaccinated and boosted (if eligible*) against COVID-19 and are not exhibiting any symptoms. The camper should be tested on day 5 after exposure. All illness or close physical contact with someone with COVID-19 will be reported to camp staff as soon as possible.

Attending Camp after Travel

Campers who are not fully vaccinated and boosted (if eligible*) should be tested 3-5 days after returning and stay home and self-quarantine for a full 5 days after travel, even if their test is negative.

Campers who are fully vaccinated and boosted (if eligible*) against COVID-19 can travel within the United States and do not need COVID-19 testing or post-travel quarantine as long as they continue to take precautions while traveling, including: wearing a mask, avoiding crowds, and washing hands frequently.

Acceptable Proof of Vaccination or Negative COVID-19 Test Results

For vaccinated campers required to provide proof of vaccination, the following are acceptable forms of proof of full vaccination:

- Vaccination card, including person’s name, type of vaccine and date of final dose OR
- a photo of a vaccination card as a separate document or stored electronically OR
- documentation of vaccination from a healthcare provider electronic health record or state Immunization Information System record.

In circumstances where a negative COVID-19 test is required, only laboratory or healthcare provider-administered PCR tests will be accepted. Antigen tests or self-reported tests not from a test provider, laboratory or healthcare provider will not be accepted. Acceptable forms of proof of a negative COVID-19 test result are:

- Printed test result document (from the test provider or laboratory) OR
- an email or text message stored electronically from the test provider or laboratory.
Information provided in the test results should include:

- the name of the person tested,
- the type of test performed, and
- the date the test was administered.

Certification

I am the parent or legal guardian with responsibility for the minor enrolled in camp. I am in receipt of the Summer 2022 Sick Camper Policy and I have read it in full, understand it completely, and agree to follow all provisions of this policy including health screenings and reporting of any illness or positive COVID-19 diagnosis.

Parent/Guardian Signature: __________________________________________ Date: ______________

*Depending on age, individuals are generally eligible for a booster shot either: (1) 6 months after completing the primary series of Pfizer or Moderna vaccine, OR (2) 2 months after completing the primary series of J&J vaccine.

** For the purpose of this policy, “travel” includes, but is not limited to:
- Using long-distance public transportation (e.g. cruise ships, interstate buses, airplanes)
- Lodging in a multi-household setting outside your primary residence (e.g. hotels, campgrounds, accommodations shared with another household)
